

VCs miss the best founders.

The signal exists. Most teams never see it.

● Every VC searches the same way.

Dealflow is reactive

Teams rely on warm intros, newsletters and Crunchbase — sources every competitor uses simultaneously.

Breakout founders invisible

The best deals surface when founders are unknown. By the time they appear on AngelList, the round is oversubscribed.

Signal exists — unstructured

Smart investors already follow promising builders on X. That collective attention is a gold mine. Nobody mines it.

traqr.ai

traqr.ai monitors which founders and builders the most sophisticated investors secretly started following — before any announcement, round, or press coverage.

→ **350+ Curated Signal Sources**

200 VCs, 100 angels, 50 tech journalists tracked. When 3+ follow the same unknown person, you get an alert — not noise.

→ **Evidence, Not Scores**

Every signal is traceable: who followed, when, how many. No black box — full audit trail per profile.

→ **Inbox for Early Sourcing**

A prioritized daily list of people gaining real investor attention right now, with LinkedIn & GitHub context.

Already building. Already backed.

Detected by traqr.ai before public announcements — all have raised or exited.
